BACKEND DEVELOPMENT

Web back-end is the invisible backbone that connects and interconnects various parts of a software application. Without effective & efficient back-end web development your customer cannot have a good experience on your website.

Hence, to help you avoid such a scenario, Avotima offers wide range of backend development services. Having expertise in various languages & frameworks, we process & manage data efficiently. The key priorities for Avotima web backend & application development are security, accuracy, redundancy, and of course performance!

TECHNOLOGIES WE EXCEL IN: PHP, JAVA, .NET, Python, ROR

WE DELIVER:

- Proficient project and content management services.

- Web & mobile app developers with experience in various backend technologies.

- Custom REST API services & solutions.

- Interactive & user-friendly applications & software products.

- Test & behavior driven development.

FRONTEND DEVELOPMENT

In Frontend Development, we satiate our desire to visually design something while opening the Programming wings at the same time. We work with different platform, focusing on creating websites that result in a pleasing browsing experience for the user - making sure that the website is viewable on whatever sized screen, bug-free,fast, and beautiful. We work mainly on HTML5, CSS3, JavaScript and JavaScript Frameworks like React.js, Angular.js, Ember.js, Meteor.js, Node.js etc.

- Full cycle mobile and web UI design services (iOS and Android)
- Team of experts creating great user experience designs
- Deep search analysis to produce ground-breaking and user-driven designs
- Responsive design supporting all types of popular devices and browsers
- Icon and theme design

We are responsible for successful branding and gaining the trust & confidence of the visitor. Therefore, to help you achieve these goals effortlessly, we offer front-end & UI development services, with exceptional usability, dependability & UX design.

MOBILE APP DEVELOPMENT

With the exploding popularity of smartphones and tablets, mobile application development is becoming a more and more popular medium of software creation. The creation of mobile applications draws much of its roots from traditional software development. The end result, however, is software intended to utilize the unique features and hardware of mobile devices.
